

CONSTRUCTION SITES

In today's world, construction site security is becoming increasingly important for keeping people, equipment, and property safe from theft, vandalism, and fire. This is how Centurion can protect your assets.

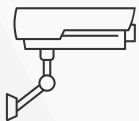

Intruder Detection

The surveillance system incorporates multiple layers of protection to detect intruders before they enter the construction site. The system uses advanced motion detection and video analytics technology to trigger alarms and send alerts to security personnel. The cameras are equipped with night vision and thermal imaging capabilities to detect intruders in low light and poor weather conditions.

Access Control

The surveillance system Centurion provides uses advanced access control technology to restrict unauthorized access to the construction site. The system provides secure access to authorized personnel and contractors, while preventing unauthorized access by potential intruders.

High Resolution Cameras

Thermal Imaging Cameras

Biometric Authentication

Smart Card Authentication

Perimeter Protection

The surveillance system uses advanced perimeter protection technology to secure the construction site's outer perimeter. The system provides secure fencing and barriers to prevent intruders from gaining access to the construction site.

Electric Fencing

Barrier Gates

Electronic Sensors

Environmental Monitoring

The Centurion surveillance system includes environmental monitoring technology to monitor and detect changes in the environment on and around the construction site

Advanced Monitoring Equipment

Humidity Monitor

Temperature Monitor

Fire Prevention

The surveillance system includes fire prevention technology to keep the construction site safe from fires. The system provides early warning and alerts for potential fires to prevent serious damage.
