

MANUFACTURING PLANTS

In today's constantly evolving digital landscape, manufacturing plants are at an increased risk of unauthorized access, theft, and data breaches. This is how Centurion can protect your assets.

Intruder Detection

The surveillance system incorporates multiple layers of protection to detect intruders before they enter the manufacturing plant. The system uses advanced motion detection and video analytics technology to trigger alarms and send alerts to security personnel. The cameras are equipped with night vision and thermal imaging capabilities to detect intruders in low light and poor weather conditions.

High Resolution Cameras

Thermal Imaging Cameras

Real-Time Monitoring

Motion Detection Sensors

Access Control

The surveillance system Centurion provides uses advanced access control technology to restrict unauthorized access to the manufacturing plant. The system provides secure access to authorized personnel and contractors, while preventing unauthorized access by potential intruders.

Biometric Authentication

Smart Card Authentication

Two-Factor Authentication

Perimeter Protection

The surveillance system uses advanced perimeter protection technology to secure the manufacturing plant's outer perimeter. The system provides secure fencing and barriers to prevent intruders from gaining access to the manufacturing plant.

Electric Fencing

Barrier Gates

Electronic Sensors

Cyber Security

Protecting manufacturing plants against cyber attacks is critical to ensure the safety and security of the plant's operations and the integrity of the products being manufactured. Monitoring for suspicious activity on computer systems and networks is critical to detecting and responding to cyber attacks.

Monitoring Activity

Regular Testing & Assessment

Fire Prevention

The surveillance system includes fire prevention technology to keep the manufacturing plant safe from fires. The system provides early warning and alerts for potential fires to prevent serious damage.

Fire Detection

Fire Suppression

Alerts & Notifications

Real-Time Analytics

The surveillance system uses advanced real-time analytics technology to process and analyze the data collected by the system's sensors and cameras.

Real-Time Data Processing
