RETAIL

A secure retail environment is critical for the safety of employees, customers, and assets. This is how Centurion can protect your assets.
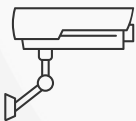

Intruder Detection

Intrusion detection systems can be used to detect unauthorized access to the store after hours and staff-only designated areas This can include motion sensors, door and window sensors, and video analytics.

Access Control

Access control systems restrict access to certain areas of the store or limit who can enter the store during certain times. This can be done through the use of smart cards, biometric identification systems, or even facial recognition technology.

High Resolution Cameras

Real-Time Monitoring

Biometric Authentication

Smart Card Authentication

Motion Detection Sensors

Facial Recognition

RFID Inventory Management

Radio-frequency identification (RFID) technology is a way for retailers to identify items using radio waves. It transmits data from a RFID tag to a reader, giving you accurate, real-time tracking data of your inventory.
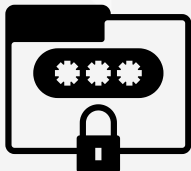

RFID Anti-Theft Tag

Asset Tracking Data

Point of Sale Security

POS security systems can be used to prevent employee theft and increase customer trust by requiring authorization for certain transactions or by tracking all transactions and flagging any suspicious activity.

End-to-end Encryption

Two-Factor Authentication

Physical Security

Centurion Africa provides highly trained guards that patrol, monitor activity, deter theft and respond immediately to any security breaches.

Live Patrols

Guarding

Real-Time Analytics

The surveillance system uses advanced real-time analytics technology to process and analyze the data collected by the system's sensors and cameras.
